ABOUT US

Saradar Al-Kuwait Est for Computers stands at the forefront of the IT and Cybersecurity landscape, dedicated to delivering exceptional services to our ever-expanding clientele. With a robust 12-year history, our operational philosophy is anchored in a customer-centric approach, ensuring that we not only meet but exceed our clients' expectations.

Our comprehensive suite of offerings includes:

- **IT Consultancy and Cybersecurity Services:** We provide expert guidance and tailored strategies to enhance your organization's security posture against evolving threats.
- **Web Services and Software Development:** Our innovative solutions are designed to meet the specific needs of businesses, from website development to custom software applications.
- **Hardware Supply:** We supply a wide range of IT equipment, including computers, laptops, printers, monitors, and related accessories, ensuring that our clients have access to high-quality technology.
- **Annual Maintenance Contracts:** Our maintenance services guarantee that your systems run smoothly, minimizing downtime and maximizing productivity.
- **Manpower Provision:** We offer skilled manpower solutions for both corporate and government sectors, helping organizations find the right talent to meet their operational needs.

Our seasoned consultants conduct thorough project studies and provide comprehensive consultation services, leveraging their expertise to deliver effective solutions. We are equipped with a secure warehouse and streamlined delivery facilities, allowing us to guarantee swift and reliable service delivery to our esteemed clients.

With a substantial paid-up capital of KD 50,000 and a dedicated workforce, we are committed to carving out a formidable presence in Kuwait's burgeoning IT and Cybersecurity market.

Our strategic partnerships with industry-leading entities such as HP, DELL, Cisco, and Epson empower us to furnish our clients with top-tier products and services. By continuously evolving and adapting to the dynamic IT landscape, Saradar Al-Kuwait Technologies remains a trusted partner for businesses seeking excellence and innovation in technology solutions.

VISION

To redefine the landscape of IT and cybersecurity services by delivering innovative, scalable, and customer-centric solutions that exceed expectations and foster long-term partnerships.

Key elements of vision:

- **Customer-Centric Approach:** We are committed to understanding our client's unique needs and tailoring our solutions to meet their specific requirements.
- **Innovation:** We continuously invest in research and development to stay ahead of emerging threats and leverage the latest technologies to deliver cutting-edge solutions.
- **Expertise and Experience:** Our team of highly skilled professionals brings a wealth of experience in IT and cybersecurity, ensuring that our clients receive the highest quality services.
- **Scalability:** We offer flexible solutions that can adapt to our clients' changing needs and business growth.
- **Partnership:** We strive to build long-term partnerships with our clients based on trust, collaboration, and mutual success.
- **Ethical Conduct:** We adhere to the highest ethical standards and prioritize data privacy and security in all our operations.

MISSION

At Saradar Al-Kuwait Est For Computers, our mission is to empower businesses by providing innovative, tailored IT and cybersecurity solutions that enhance operational efficiency and security. We are committed to delivering exceptional service, fostering lasting partnerships, and driving technological advancement in Kuwait's rapidly evolving market. Through our expertise, customer-centric approach, and strategic alliances, we strive to be the trusted partner that our clients rely on for all their technology needs.

OBJECTIVES

- Maintain a steadfast commitment to excellence in all our service endeavors.
- Improve client satisfaction by delivering services that meet industry standards.
- Stay abreast of the latest technologies and best practices to effectively serve our clients.
- Demonstrate proficiency in all our service areas by cultivating a highly skilled professional workforce.

SERVICES

- **Cyber Security Services**
- **Cyber Security Products**
- **IT Consultancy Services**
- **Web Services**
- **Hardware services – Big Machines**
- **Software Development**
- **Annual Maintenance Contracts**
- **Firewall Network assurance**
- **Network IOT Services**
- **Microfilms Machines and Maintenance**
- **WhatsApp API services**
- **Mobile Cyber Security Solution Services**

CYBER SECURITY SERVICES

MANAGED CYBER SECURITY SERVICES – MSS

At Saradar Al Kuwait Est For Computers, we offer a diverse range of cybersecurity services designed to strengthen your organization's defence posture. Below is a high-level overview of our key services:

- **Penetration Testing Services:** We simulate real-world attacks to identify security vulnerabilities in your systems, helping you prevent potential breaches.
- **Vulnerability Assessment Services:** We conduct thorough scans and evaluations to detect, prioritize, and mitigate vulnerabilities across your IT infrastructure.
- **Red and Purple Teaming Activity:** Our Red Teams simulate attackers, while Purple Teaming ensures collaboration between offensive and defensive security teams to improve overall resilience.
- **OSINT Threat Exposure Assessment:** Using Open Source Intelligence, we assess your exposure on the web, dark web, and other external platforms to identify potential risks to your organization.
- **Threat Hunting Services:** We create customized threat models and actively hunt for advanced threats that may be lurking within your network, enhancing proactive defence.
- **Compliance Audits:** We help ensure your organization meets regulatory standards, such as PCI DSS, ISO 27001, and GDPR, providing peace of mind and reducing the risk of compliance violations.
- **Incident Response:** Our experts provide rapid containment, investigation, and remediation services to minimize damage during security breaches.

- **Professional Services:** We offer expert consultancy to design, implement, and optimize security strategies, tailored to your specific business objectives.
- **Current State Assessment:** Evaluate the existing security infrastructure and practices to provide a roadmap for improving your organization's overall cybersecurity maturity.
- **Threat Modelling:** Analyse potential attack vectors and build defined strategies based on how threats might target your systems.
- **Malware Analysis:** Identify and analyse malware to understand its Behavior, mitigate its effects, and prevent future infections.
- **Configuration Assessment:** Review and assess the configuration of systems and networks to ensure optimal security and compliance with best practices.
- **Security Architecture Review:** Examine your organization's security architecture to identify gaps, weaknesses, and areas for improvement in design and implementation.

Saradar Al Kuwait Est For Computers is dedicated to safeguarding your organization through cutting-edge cybersecurity solutions tailored to your unique needs. With our expert team and diverse range of services, we ensure that your systems are protected, compliant, and resilient against today's evolving cyber threats. Partner with us to fortify your security posture and maintain business continuity in an increasingly complex digital landscape.

MANAGED SECURITY OPERATIONS CENTER (MSOC)

Our NextGen Managed Security Operations Center (MSOC) acts as your virtual security command center, staffed by experienced security analysts who monitor your environment 24/7. They utilize cutting-edge security tools to detect and respond to threats in real time, minimizing potential damage and ensuring a swift response. Our managed SOC service, delivered through a Unified Threat Management Portal with zero EPS charges, is designed to enhance cybersecurity for organizations.

Key Features of Our Managed Security Offerings (MSOC):

- **Managed Threat Detection and Response Service:**
 - Over 1000 automated use cases for comprehensive threat detection.
 - Automated alert investigations powered by machine learning (ML) and artificial intelligence (AI).
 - Advanced threat mitigation capabilities for real-time response to potential threats.
- **User and Entity Behavior Monitoring:**
 - Leveraging ML and AI to detect anomalies in user and entity behavior.

- **Threat Hunting Services:**
 - 100+ automated hunt scenarios for quick identification and investigation of potential threats.
- **Compliance Monitoring:**
 - A dedicated compliance module is integrated into the threat management platform.
- **Threat Intelligence Services:**
 - Stay informed about emerging threats without the need for expensive cyber threat intelligence subscriptions.

MANAGED EDR SERVICE

Our 24/7 Managed Endpoint Detection and Response (EDR) service provides 24/7 monitoring and protection of endpoints across your organization. By leveraging advanced threat detection and automated response capabilities, we ensure swift identification and mitigation of endpoint threats. This service includes expert analysis, proactive threat hunting, and rapid incident response to safeguard against malware, ransomware, and other cyberattacks.

- **24/7 Threat Monitoring:** Continuous monitoring of endpoints to detect and respond to threats in real time, ensuring swift mitigation of security incidents.
- **Proactive Threat Hunting:** Active hunting for advanced threats and vulnerabilities, leveraging extensive threat intelligence to stay ahead of potential attacks.
- **Rapid Incident Response:** Immediate incident response capabilities to contain and remediate threats, minimizing potential damage and downtime.
- **Detailed Reporting and Insights:** Comprehensive reporting and analytics provide visibility into security posture and help inform strategic decision-making.

MANAGED MOBILE THREAT MANAGEMENT SERVICE

Our 24/7 Managed Mobile Threat Management (MTM) service protects mobile devices from emerging threats, such as phishing, malware, and device compromise. We offer continuous monitoring and threat detection for both company-owned and BYOD devices, ensuring secure mobile environments and preventing unauthorized access to sensitive corporate data.

- **Real-Time Mobile Threat Detection:** Continuous monitoring of mobile devices for potential threats, ensuring immediate detection and response to mobile vulnerabilities.
- **User and Device Compliance Monitoring:** Ensures compliance with security policies across all mobile devices, reducing the risk of data breaches.

- **Threat Intelligence Integration:** Incorporates up-to-date threat intelligence for proactive defence against evolving mobile threats.
- **24/7 Support and Management:** Dedicated security analysts monitor mobile environments around the clock, providing peace of mind for organizations.

MANAGED NDR SERVICE

Our 24/7 Managed Network Detection and Response (NDR) service focuses on detecting and responding to advanced network threats. Using behavioral analytics and machine learning, this service identifies anomalies, lateral movement, and malicious traffic in real-time. With proactive threat hunting and advanced network visibility, our NDR service helps to prevent and mitigate sophisticated attacks across your entire network infrastructure.

- **24/7 Network Traffic Monitoring:** Continuous analysis of network traffic to identify suspicious behaviour and potential threats in real time.
- **Behavioural Analytics:** Leverages advanced analytics to detect anomalies and unusual patterns indicative of security breaches.
- **Rapid Threat Response:** Immediate actions taken to neutralize threats, minimizing potential impact on business operations.
- **Comprehensive Security Posture:** Detailed insights and reporting help organizations strengthen their overall security framework and compliance efforts.

CYBER SECURITY PRODUCTS

ADVANCED LOG MANAGEMENT SOLUTION

Our advanced data analytics platform provides proactive threat detection and mitigation using AI-driven insights and real-time data analysis. It continuously scans for hidden threats with automated investigation playbooks, enabling rapid response and instant action. The platform operates with zero EPS, making it cost-efficient while delivering comprehensive log analysis across endpoints, cloud environments, servers, and network devices. With automated threat-hunting playbooks, high availability through multiple clusters, and flexible hosting options, it ensures scalable and reliable security for your organization.

SIEM SOLUTIONS

We offer a wide range of market-leading SIEM solutions tailored to meet diverse security needs. These solutions provide real-time monitoring, log aggregation, and threat detection capabilities by integrating data from multiple sources such as endpoints, servers, network devices, and cloud environments. With advanced AI-driven analytics, they detect anomalies, uncover hidden threats, and correlate security events for effective incident response. Our SIEM offerings also include customizable dashboards, automated playbooks, and flexible deployment options, ensuring that organizations can choose the solution that best aligns with their security requirements.

AUTOMATED THREAT HUNTING PLATFORMS

Our advanced threat-hunting platforms are designed to proactively identify and mitigate security threats before they impact your organization. With AI-driven insights and a vast repository of threat intelligence, these platforms empower security teams to detect both known and unknown threats, including zero-day vulnerabilities. They offer real-time data analytics, continuous network monitoring, and automated response capabilities to ensure rapid and accurate threat detection.

Key features include automated investigation playbooks with 1000+ fully automated use cases, 100+ automated threat-hunting playbooks, comprehensive log collection from diverse sources, and seamless scalability with high availability. These platforms also support flexible deployment models, whether on-premises, cloud, or hybrid environments, offering a robust solution for organizations of all sizes.

END POINT DETECTION AND RESPONSE (EDR) SOLUTIONS

Our Endpoint Detection and Response (EDR) solutions provide comprehensive endpoint visibility, advanced threat detection, and rapid incident response. Designed to monitor endpoint activities in real-time, these solutions detect and neutralize advanced threats such as malware, ransomware, and fileless attacks. With AI-driven analytics and behavioural monitoring, EDR ensures swift detection of anomalous activities, minimizing damage and reducing response times. EDR solutions also include automated investigation workflows to contain threats before they spread, ensuring the security of your organization's endpoints.

NETWORK DETECTION AND RESPONSE (NDR) SOLUTIONS

Network Detection and Response (NDR) solutions focus on monitoring and analysing network traffic to detect anomalies, lateral movements, and advanced threats across your network environment. Leveraging AI and machine learning, NDR provides deep network visibility and threat intelligence to detect and respond to sophisticated attacks, including those bypassing traditional security controls. NDR solutions enable proactive threat hunting, giving organizations a defence mechanism that identifies hidden threats and improves overall security posture through continuous network traffic analysis.

SANDBOXING SOLUTIONS

Our sandboxing solutions offer a secure, isolated environment where suspicious files, URLs, and email attachments can be executed safely to observe their behaviour. By analysing how potential threats interact with the system, sandboxing detects malicious activities like zero-day exploits, ransomware, and advanced persistent threats (APTs) that evade traditional detection. With real-time analysis and detailed reporting, sandboxing provides actionable insights to prevent harmful malware from entering your network.

WAF (WEB APPLICATION FIREWALL)

Web Application Firewall (WAF) solutions protect your web applications by filtering and monitoring HTTP/HTTPS traffic to prevent attacks such as SQL injection, cross-site scripting (XSS), and DDoS attacks. WAFs provide real-time threat detection and mitigation, securing your applications from vulnerabilities that could lead to data breaches or application compromise. With flexible deployment models and

customizable policies, WAF solutions ensure that your web applications remain secure without impacting performance.

NEXT-GEN FIREWALL (NGFW) SOLUTIONS

Next-Gen Firewall solutions go beyond traditional firewalls by integrating advanced security features like deep packet inspection, intrusion prevention, and application control. NGFWs offer real-time threat intelligence, providing enhanced protection against modern threats such as malware, ransomware, and advanced persistent threats (APTs). With built-in SSL inspection and integrated identity management, NGFWs ensure that your network traffic is secure and that unauthorized access is prevented, offering comprehensive protection for your enterprise network.

ANTIVIRUS SOLUTIONS

Antivirus solutions provide essential endpoint protection against a wide range of threats, including viruses, malware, ransomware, and phishing attacks. Equipped with real-time scanning, behavioural analysis, and automatic updates, these solutions detect and eliminate malicious software before it can cause harm. Modern antivirus solutions leverage cloud-based threat intelligence to offer protection against emerging threats, ensuring your devices remain safe and secure across multiple platforms.

INTRUSION PREVENTION SYSTEM (IPS)

Intrusion Prevention Systems actively monitor network traffic and automatically block malicious activities by identifying and mitigating threats in real time. IPS solutions use signature-based and anomaly-based detection techniques to recognize known vulnerabilities and emerging threats. By proactively preventing unauthorized access, malware infections, and denial-of-service attacks, IPS solutions provide an essential layer of defence to keep your network secure.

INTRUSION DETECTION SYSTEM (IDS)

Intrusion Detection Systems monitor network and system activity for suspicious behaviour and potential security breaches. IDS solutions are designed to detect both known and unknown threats by analysing network traffic, system logs, and user activity. While IDS focuses on detecting and alerting security teams about potential threats, it works in tandem with other security tools, such as firewalls and IPS, to provide comprehensive network visibility and improve overall threat detection and response capabilities.

PRIVILEGE ACCESS MANAGEMENT (PAM) SOLUTION

We provide a comprehensive Privilege Access Management (PAM) solution that safeguards sensitive information and critical systems within your organization. By controlling and monitoring privileged accounts, our PAM solution mitigates the risk of unauthorized access and potential data breaches. We enforce least-privilege policies, ensuring that users have only the access necessary to perform their duties. With features like session recording, real-time alerts, and comprehensive auditing, our solution maintains visibility and compliance while protecting against insider threats and credential misuse.

NETWORK ACCESS CONTROL (NAC) SOLUTION

Our Network Access Control (NAC) solution offers a robust framework for managing and securing access to network resources. By verifying user identities and device compliance before granting access, we ensure that only authorized devices and users can connect to the network. Our NAC solution enhances security by continuously monitoring network activity, enforcing security policies, and isolating non-compliant devices. With the ability to adapt to various network environments—whether on-premises or in the cloud—our NAC solution plays a critical role in defending against threats and maintaining a secure network infrastructure.

IDENTITY AND ACCESS MANAGEMENT (IAM)

We offer robust Identity and Access Management (IAM) solutions designed to enhance security and streamline user access within organizations. Our IAM solutions empower clients to manage user identities effectively and control access to sensitive information and systems. Key features include:

- **User Provisioning and Deprovisioning:** Automates the process of granting and revoking access as roles change, ensuring only authorized individuals have access.
- **Single Sign-On (SSO):** Simplifies user experience by allowing access to multiple applications with a single set of credentials, while maintaining strong security controls.
- **Role-Based Access Control (RBAC):** Assigns permissions based on user roles, ensuring that employees have access only to the information necessary for their job functions.
- **Audit and Compliance Reporting:** Provides comprehensive logs and reports to meet regulatory compliance and facilitate auditing processes.

DATA LOSS PREVENTION (DLP)

Our Data Loss Prevention (DLP) solutions are designed to protect sensitive data from unauthorized access and potential breaches. We help clients safeguard their confidential information, ensuring compliance with data protection regulations. Key features include:

- **Content Inspection:** Monitors data in transit, at rest, and in use to identify sensitive information, such as personally identifiable information (PII) and financial data.
- **Policy Enforcement:** Implements strict rules to prevent unauthorized sharing of sensitive data via email, cloud storage, or external devices.
- **Incident Response:** Offers alerts and automated responses to potential data breaches, enabling rapid remediation to minimize risks.
- **Compliance Management:** Assists organizations in adhering to regulatory requirements by ensuring proper data handling and reporting practices.

CYBERSECURITY AWARENESS PLATFORMS

We offer a robust cybersecurity awareness platform designed to enhance organizational security by improving employee knowledge and preparedness. By providing interactive training modules and realistic testing scenarios, this solution strengthens the human element of your security posture, fostering a more resilient defense against cyber threats for our clients.

Key Components:

- **Awareness Campaigns:** Our platform delivers engaging cybersecurity training initiatives that keep employees informed about the latest threats through interactive content via email and SMS, including quizzes, animated 2D/3D materials, and gamified experiences.
- **Assessment Campaigns:** We conduct real-world simulations to test employees' awareness and response capabilities, featuring:
 - **Phishing Emails:** Carefully crafted emails designed to assess employee vigilance.
 - **Smishing (SMS Phishing):** Simulated SMS messages that evaluate the awareness of SMS-based scams.
 - **Vishing (Voice Phishing):** Realistic phone calls aimed at testing employees' susceptibility to providing sensitive information.
- **Deep Fake Studio:** This unique feature allows the creation of deep fake videos and audio to simulate advanced cyber threats, enhancing employees' ability to recognize sophisticated attacks.
 - **Deep Fake Videos:** Simulated messages from managers or colleagues to assess employee awareness.
 - **Deep Fake Audio:** Audio mimicking known voices to challenge employees' responses to potential scams.
- **Content Library:** Our platform includes a vast repository of pre-built content and templates in both English and Arabic, covering various topics and attack vectors, such as phishing, smishing, and ransomware. Additionally, it allows for the creation of customized content using generative AI, enabling organizations to tailor training and assessments to align with their specific security objectives.

This comprehensive solution is available to clients looking to cultivate a vigilant and informed workforce, ultimately strengthening their overall cybersecurity posture.

CYBER RANGE SOLUTIONS

Our cyber range solutions immerse cybersecurity teams in lifelike threat scenarios, simulating real-world cyberattacks within a controlled, air-gapped environment. This hands-on experience with realistic simulations enables IT, SOC, and network teams to evaluate and enhance their response strategies effectively. Equipped with a robust tool stack and seamless integration capabilities, our cyber range empowers teams to practice diverse attack scenarios, ensuring they are well-prepared for actual cyber threats.

Key Features of Cyber Range

- **50+ Diverse Simulation Solutions:** A wide array of scenarios covering various attack vectors to prepare teams for multiple threat landscapes.
- **Instructor-Led Training:** Experienced instructors guide participants through simulations, providing expert insights and feedback.
- **No Infrastructure Required:** A fully SaaS platform that eliminates the need for additional hardware or software installations, ensuring easy access and setup.
- **40+ Real-World Cyber Attack Simulations:** Engaging exercises that mimic actual cyber threats, helping teams practice and refine their response strategies in a safe environment.

CYBER LABS

Our cyber labs provide tailored, instructor-led and self-paced learning experiences designed to deliver comprehensive cybersecurity education. With engaging labs that reinforce practical skills, they support flexible learning styles, allowing teams to upskill at their own pace. By integrating real-world scenarios and hands-on labs, our cyber labs equip cybersecurity professionals with the knowledge and certifications needed to excel in today's evolving threat landscape.

Key Features of Cyber Labs

- **Self-Paced Courses:** Flexibility for participants to learn at their own speed, accommodating diverse schedules and learning styles.
- **Hands-On Labs:** Practical exercises that reinforce theoretical knowledge, allowing users to apply what they've learned in real-world scenarios.
- **Quizzes and Assessments:** Regular assessments to gauge understanding and retention of key concepts, ensuring a solid grasp of material.
- **Structured Learning Paths:** Clearly defined educational pathways that guide participants through various topics, enhancing their learning experience and skill development.

IT CONSULTANCY SERVICES

We provide a full range of consultancy services from requirement gathering to IT infrastructure setup, and support to help remove the hassles out of your IT projects.

We provide impartial advice in a number of technical and business areas such as:

IT STRATEGY AND MANAGEMENT

We assist organizations in developing clear-cut strategies for their IT infrastructure setup and management. We study and analyze the technical, business and organizational requirements to arrive at the optimum strategy to be implemented and followed.

INFRASTRUCTURE SERVICES

Our support enables our clients to design and implement the finest IT infrastructures that support the business and IT alignment.

NETWORKING SOLUTIONS

We can help organizations of any size to share information easily and become more efficient with cost-effective network solutions. We provide expert design, installation and configuration of hardware and software to ensure a successful Local Area Network (LAN), WAN or wireless project. In addition to installations, our professionals also provide ongoing troubleshooting, maintenance and support of networks. Our core competency includes providing advanced network systems architecture, leading-edge applications, streamlined communications, and cost-effective network solutions.

The solutions we offer are scalable which are designed with the future in mind - allowing the clients network to grow as their business expands.

Our LAN / WAN design team can assess, plan, design and implement the infrastructure and support services that enable you to run your business efficiently. These consulting services are based on a proven approach, utilizing the latest tools and techniques, which results in a "best practices" solution. Our consultants are certified by major vendors and offer practical solutions for connectivity and coexistence issues. They can examine an existing infrastructure, quickly Pinpoint problems, and define tactical and strategic solutions for chronic infrastructure and support service problems.

Our experience in networking and connectivity includes:

- Windows NT 4.0/XP/Vista/Windows 7/2000/2003,2008 installation and support
- Netware 3.X / 4.X installation and support
- Internet connectivity (TCP/IP, router installation, Proxy Server)
- MS Exchange Server (single site and multiple site configurations)
- MS SQL Server (setup, design, programming)

APPLICATION DEVELOPMENT

When commencing the development/procurement of a new application or website, our consultants possessing extensive business experience can work with you and your stakeholders to develop a specification which is in line with the goals of your organization.

WEB SERVICES

A successful online presence requires good content, structure, and relevance. We guide our clients to develop and implement an effective internet strategy; a very powerful marketing resource for the business. We provide quality service with extensive business knowledge and strong designing skills.

Our web services consist of:

WEBSITE DESIGN AND DEVELOPMENT

A balanced blending of technology, creativity and client vision helps us create competitive, visually attractive and technically competent websites. Our custom design approach coupled with state-of-the-art technologies promises our clients with an excellent end product exceeding their expectations.

WEB APPLICATIONS

Developing applications calls for a considerable involvement of clients in terms of the vision they hold. Our qualified developers work in line with the expectations of clients to craft a flawless output.

WEB HOSTING SERVICES

Our hosting services allow clients to choose from the options which suit their needs. In addition to the basic infrastructure provided, we offer many advanced features such as control panel, Front Page Extension, Support for Perl, CGI, PHP 5, PHP, My SQL Database, My SQL 2005, ASP, ASP.Net, .Net Framework, ASP.NET AJAX, ASP Email, ASP Upload, ASP Jpeg, Python, IMAP, phpMyAdmin.

Based on features, we offer three hosting packages:

- **SKT Basic Plan**
- **SKT Silver Plan**
- **SKT Gold plan**

EMAIL HOSTING

We offer a variety of E-mail solutions such as POP E-mail, Hosted Exchange, Store & Forward E-Mail

WEB MAINTENANCE

It is important to keep the website current with relevant information to have a successful online presence. We provide quality service and strong programming skills to implement and manage the clients' websites.

SEARCH ENGINE OPTIMIZATION

The ultimate objective of our SEO services is to increase the quality of the website which would attract qualified, relevant traffic ready to purchase a product, download a demo, fill out a form, or whatever desired action is appropriate. Our multi-step approach to SEO ends with a report on the performance and traffic of clients' websites.

If you would like more information about our hosting packages please feel free to contact us for more information. We also offer domain registration services at affordable prices.

HARDWARE SERVICES

HARDWARE PRODUCTS

Through our Hardware development services, we offer high-quality brands and products to the local market by maintaining excellent service after sales.

- Laptops/Desktops
- Printers, Faxes, Scanners, Copier, Plotters, Terminals, projectors
- Servers, UPS's, Lab / Industrial Controls and Instrumentation
- Peripherals, components.
- Microfilms

SOFTWARE DEVELOPMENT

Through our software development services, we offer the development of new custom solutions, integrating individual systems, adding custom modules to existing systems, or simply aiding in the maintenance of your current system. SKT operates within a project-model framework by taking complete ownership of a development project; from requirements gathering to implementation. We design custom solutions for various industries such as manufacturing, health care, warehousing, and finance. Apart from designing software on a stand-alone platform, we also undertake the development of software which involves a user interface and a database.

CUSTOM DEVELOPMENT

Our custom development services are offered to clients who seek competitive advantage, productivity enhancement, or cost controls over typical commercial market products.

INTEGRATION DEVELOPMENT

We possess expertise in integrating your back office systems which would result in increased efficiency and can significantly reduce costs. We can assist you in connecting your independent systems into a single fully functional one.

REPORTING

Information provided to your clients mandates accuracy and time schedules. We are experts in developing reports whether it is PC based or interactive web-based.

ANNUAL MAINTENANCE CONTRACTS

Flexibility is our hallmark in this line of service. We attribute a greater level of importance to after-sales service which is critical for excellent customer relationships.

SKT offers AMC in three major categories

- AMC for Websites
- AMC for IT Infrastructure (Network and Hardware)
- AMC for Software Applications
- Microfilms Maintenance
- Firewall Network assurance

OUR CLIENTELE

CUSTOMERS CATEGORIES

- Government & Semi-Government sector. (Prime minister, Ministry of defence , environment authority public, Diwan Amiri, Interior Ministry, PADA, KUNA, PAAET, Foreign ministry)
- Private Sector, Banks, Investment and Insurance companies. (CBK bank, Gulf bank, Boubyan bank,ZAIN, VIVA Telecom)
- Institutes, Training centres and Educational organizations (Fajer al Soubah School, CTC, Kuwait University, American University)
- Oil Sector
- Engineering offices & contractors. (KCPC, KCCEC, KDD)
- KIPIC
